§ 200.315 Intangible property.

(a) Title to intangible property (see § 200.59 Intangible property) acquired under a Federal award vests upon acquisition in the non-Federal entity. The non-Federal entity must use that property for the originally-authorized purpose, and must not encumber the property without approval of the Federal awarding agency. When no

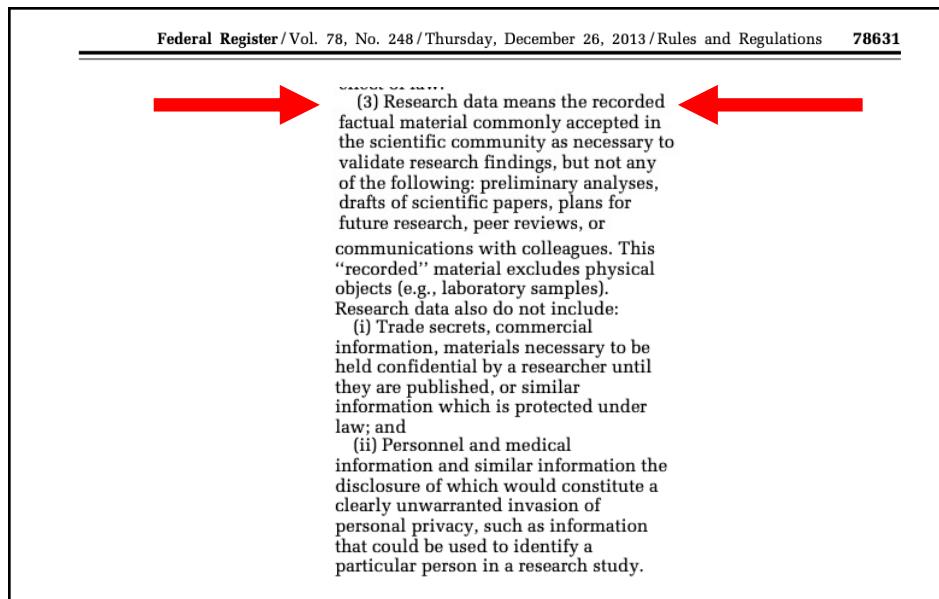

(d) The Federal government has the right to:

- (1) Obtain, reproduce, publish, or otherwise use the data produced under a Federal award; and
- (2) Authorize others to receive, reproduce, publish, or otherwise use such data for Federal purposes.

(e) Freedom of Information Act (FOIA).

(1) In addition, in response to a Freedom of Information Act (FOIA) request for research data relating to published research findings produced under a Federal award that were used by the Federal government in developing an agency action that has the force and effect of law, the Federal awarding agency must request, and the non-Federal entity must provide, within a reasonable time, the research data so that they can be made available to the public through the procedures established under the FOIA. If the

PhD student offering \$5,000 reward after car thief steals all his research

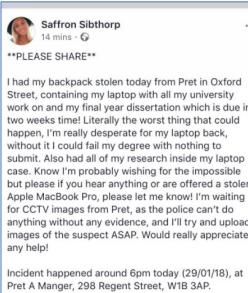

CTV Montreal
Published Wednesday, November 29, 2017 10:43PM EST

"The thief stole a backpack containing his laptop, a notebook, and a thumb drive with all his backup material... With all his work gone, he will likely have to head back to the lab and redo experiments, delaying graduation by months."

<https://tinyurl.com/ykbw07qw>

Final year student has laptop stolen in Pret, with entire dissertation due in two weeks

Her dissertation research was also in the laptop case

I had my backpack stolen today from Pret in Oxford Street containing my laptop with all my University work on and my final year dissertation which is due in two weeks time! Literally the worst thing that could happen, I'm really desperate for my laptop back, without it I could fail my degree with nothing to submit. Also had all of my research inside my laptop case. Know I'm probably wishing for the impossible but please if you hear anything or are offered a stolen Apple MacBook Pro, please let me know! I'm waiting for CCTV images from Pret, as the police can't do anything without any evidence, and I'll try and upload images of the suspect ASAP. Would really appreciate any help!

Incident happened around 6pm today (29/11/18), at Pret A Manger, 298 Regent Street, W1B 3AP.

Ouch!: Thief Steals Laptop Containing 5 Years of Ph.D. Student's Research Data

FOR MY LOST LAPTOP

I am a Rutgers Chemistry 5th year PhD student. On April 19th after class I left my laptop in my backpack which was stolen from room 203 of Wright Hallman building. If you have my laptop and now you are reading this letter, I would like to say that you can keep the computer and I would like to pay you money for my data under D drive. The data is my FIVE YEAR work. I really need the data under the D drive, there is a folder named RESEARCH, under RESEARCH folder, there is a THESIS folder. I only need that folder for my thesis defense which is coming very soon. I would like to pay you \$1000 and use whatever way you offer to send you the money. The price is negotiable. My laptop password is 850713rd, my email address is [REDACTED] and phone number is [REDACTED]. PLEASE contact me and I would appreciate it so much!!!

How long do hard drives last?

 PAUL BISCHOFF - TECH JOURNALIST, PRIVACY ADVOCATE AND VPN EXPERT
@pabischoff August 27, 2017

Hard drive failure is unpredictable, so answering the question of how long hard drives last will inherently comes with a *lot* of caveats.

Short answer: That being said, if you just want a quick rule of thumb for how long you can expect the hard drive in your laptop should last, we'd say you should be prepared for disk failure after three years of use.

Long answer: A handful of studies on the lifespan of hard drives might give you some clearer indication, but they still aren't very helpful. Many of the hard drives tested do not fail at all. These drives are also kept in controlled environments and don't undergo the same conditions as, say, your laptop drive.

Factor in the following questions:

- What brand is the hard drive?
- What do you use it for? Running applications, viewing media, or storage?
- How often do you use your computer?
- Is it frequently shaken, vibrated, or bumped?
- How hot does your computer get?

What causes hard drive failure?

Answer: Factory defects & vibration (mostly)

In the 3 June issue, Science published the Report "Environmentally relevant concentrations of microplastic particles influence larval fish ecology" by Oona M. Lönnstedt and Peter Eklov (1). The authors have notified Science of the theft of the computer on which the raw data for the paper were stored. These data were not backed up on any other device nor deposited in an appropriate repository. Science is publishing this Editorial Expression of Concern to alert our readers to the fact that no further data can be made available, beyond those already presented in the paper and its supplement, to enable readers to understand, assess, reproduce, or extend the conclusions of the paper.

THE HOTTEST YEAR

The release of climate-science e-mails last November ripped apart Phil Jones's life. He's now trying to patch it back together.

BY DAVID ADAM

"I like to think the worst is over, but it's something I'll always remember at this time of year," says Phil Jones, a climate scientist. That was the way he liked it. Head of the Climate Research Unit (CRU) at the University of East Anglia (UEA), UK, Jones worked with the CRU's Office of例行气候数据 from weather stations around the world into a monthly series showing global average temperature. He had much on his mind — not least

a puzzling drop in North Atlantic sea surface temperature that he had recently helped to discover. It was a curious finding, but Jones would soon have his thoughts challenged.

Two months ago, Phil Jones, a prominent scientist, that was the way he liked it. Head of the Climate Research Unit (CRU) at the University of East Anglia (UEA), UK, Jones worked with the CRU's Office of例行气候数据 from weather stations around the world into a monthly series showing global average temperature. He had much on his mind — not least

a puzzling drop in North Atlantic sea surface temperature that he had recently helped to discover. It was a curious finding, but Jones would soon have his thoughts challenged.

On 19 November 2009, someone released roughly 1,000 e-mail messages and documents stolen from a server at the CRU. Many of them exposed Jones and others to accusations that ranged from scientific misconduct to plans to install an autocratic world government through the spread of false hysteria about

climate sceptics, and suggested to colleagues they should delete e-mails to keep sceptics from gaining access to information. Most notably, Jones had helped to add the words "hide the decline" to a temperature chart.

Very quickly, most of the sceptic community had pronounced the accusations as evidence that Jones and others had concealed flaws in their temperature data and abused the peer-review system to gag critics of climate science. Jones was forced to face accusations that ranged from scientific misconduct to plans to install an autocratic world government through the spread of false hysteria about

NBC NEWS Audit finds U.S. anti-terror statistics inflated

Feb. 20, 2007, 10:38 PM EST / Source: The Associated Press

Federal prosecutors counted immigration violations, marriage fraud and drug trafficking among anti-terror cases in the four years after 9/11 even though no evidence linked them to terror activity, a Justice Department audit said Tuesday.

Fine's office took care to say the flawed data appear to be the result of "decentralized and haphazard" methods of collection or disagreement over how the numbers are reported, and do not appear to be intentional.

How scientists are using climate records made by 15th century Japanese monks

If you're old enough, you might remember how some flowers around where you live blossom earlier or that summers and winters are unusually harsh. In short, freak weather is more common to the point it's becoming the new norm. Human memory is fallible, which is why we keep records of things like temperature, humidity, concentration of gases in the atmosphere and so on. These record don't go back that long though -- maybe only a century. Some, however, go way back and scientists are using these to keep track of climate change over the centuries.
